Specific Filters

This would be a dynamic filter section where you could pick which dimension you want to (staff, patients, beds), and select filters specific to that dimension.

Example would be patient service. Let's say you only want to look at patients that are medicine or ALC. You would select Patients, service and then filter by ALC.

Priority KPI's

Patients

Other Details includes information outside of your priority KPI's. This would appear in a tabular format.

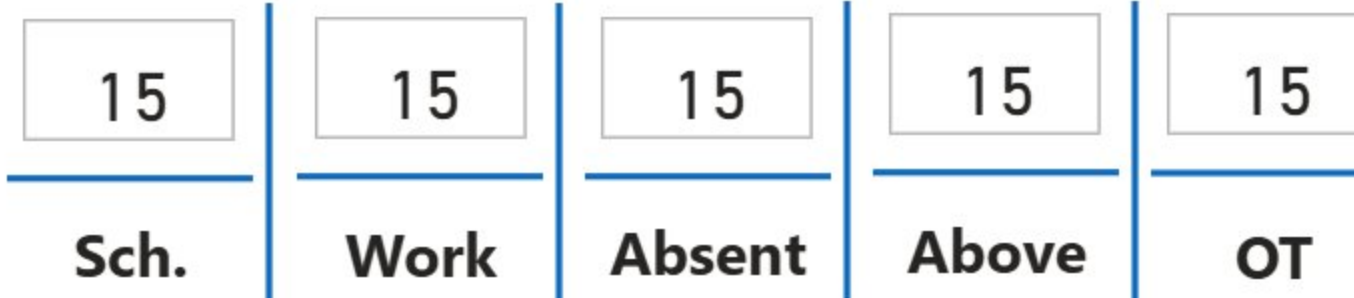

Other Details
