Document History

Version	Issue Date	Changes
<i>1.0</i>	<i>Dec 21, 2025</i>	-
2.0	Jan 21, 2025	• Added Concept Diagram for new schema. • New Schema now has Fact Table: Staff Assignment • Schema now has Dimension: Staff • Removed Provider, diagnosis, and intervention attributes from Main Tracker.

1.1 Project Purpose, Goals and Objectives

Project Purpose
To facilitate the mock hospital dashboard that can present different types of reports aimed at analysing and visually representing a variety of patient related KPI's and data. This can cover a wide variety of departments and can be used for both real-time active analysis of current patient information

1.2 Data Model Type

The database is a relational system implemented using a galaxy (fact constellation) schema to support analytical reporting across multiple clinical and operational processes.

1.4 Data Dictionary

Database Entities

Type	Business Name	Table Name	Primary Keys	Description
Fact	Patient Movement	fact_pt_move		Tracks Patient Move
Fact	Staff Assignment	fact_staff_assgn		Tracks Staff Assignment; both permanent and daily staff schedules.
Fact	Intervention Tracker	fact_int		
Dimension Conformed	Patient ID	dim_pt_id		
Dimension Conformed	Staff ID	dim_staff_id		
Dimension Conformed	Location	dim_loc_id		
Dimension Conformed	Organization	dim_org_id		
Dimension Conformed	Time and Date	dim_date_time		
Reference	Shift Codes	shift_id		
Reference	Staff Roles	staff_role_id		
Reference	Source Types	ref_source_type_id		
Reference	Move Types	ref_move_type_id		
Reference	Move Tiers	ref_move_tier_id		
Reference	Move Status	ref_move_status_id		
Reference	Visit Codes	ref_mode_visit_id		
Reference	Admit Category	ref_admit_cat_id		
Reference	Patient Service ID	ref_pt_serv_id		
Reference	Provider Service ID	ref_prov_serv_id		

Reference	Diagnosis Codes	ref_dx_id		
Reference	Provider Type ID	ref_prov_type_id		
Summary	Unit Bed Summary	summary_bed		

Entity Fields

Coming soon

1.5 Developer Notes

- There are several fields included in the source database that exist as helper cells during data creation and data entry because the data source is serving multiple purposes. These fields are included in the data dictionary located in the source document to help with readability, but these are left out of the data architecture documentation since they are cut out during the ETL process when loading it into a BI model and do no serve any functional purpose from the perspective of the user model.
